

ABSTRACT

In a printed wiring board, an odd number (n) of
conductive layers (11-13) and insulating layers (21-23) are
alternately laminated upon another. The first conductive
layer (11) is constituted as a parts connecting layer and
the n-th conductive layer (13) is constituted as an external
connecting layer which is connected to external connecting
terminals (7). The second to (n-1)-th conductive layers
(12) are constituted as current transmitting layers for
transmitting internal currents. The surface of the n-th
conductive layer (13) is coated with the outermost n-th
insulating layer (23) in a state where the external
connecting terminals (7) are exposed on the surface. It is
preferable to constitute the initial insulating layers of a
glass-cloth reinforced prepreg and the external insulating
layers of a resin.
